WHAT IS CLAIMED IS:

1. A method of injecting content into a displayed document, comprising:

    receiving information;

    determining whether the received information contains a specified location;

    inserting, if the received information contains the specified location, the injectable content into the received information at the specified location; and

    outputting the received information including the injectable content.

2. The method of claim 1, wherein receiving information includes receiving information in the form of a document.

3. The method of claim 1, wherein the specified location is at least one of a top, a bottom, a left margin, or a right margin of the document.

4. The method of claim 1, wherein the specified location is adjacent to any downloadable information identified in the received information.

5. The method of claim 4, wherein the downloadable information identified in the received information is at least one of a file, a folder, a picture, a movie, a sound, or a document.

6. The method of claim 1, wherein injectable content includes non-selectable injectable content.

7. The method of claim 1, wherein injectable content includes selectable injectable content.

8. The method of claim 7, wherein selectable injectable content includes at least one of a link to another document source, a link to another document source, a data reduction function, an information filtering function, a calculation performing function, an information printing function, an information storing function, a processing function, or a document viewing/editing function.

9. The method of claim 7, wherein selectable injectable content provides processing without installing software on an accessing device.

10. The method of claim 7, wherein processing of the selectable injectable content is provided within a server.

11. The method of claim 1, wherein:

    receiving the information comprises receiving the information at a server; and

inserting the injectable content includes associating the injectable content with the server.

12. The method of claim 1, wherein the specified location to insert the injectable content is determined by a user.

13. The method of claim 1, wherein receiving information includes receiving using at least one of either a wired connection or a wireless connection to a network.

14. The method of claim 1, wherein outputting the received information includes forwarding using at least one of either a wired connection or a wireless connection to a network.

15. An apparatus for injecting content into a displayed document, comprising:

an input circuit that receives incoming information;

a content database that stores injectable content;

a memory that stores a location for inserting the stored injectable content into the received information;

a content monitoring circuit that monitors the incoming information for a location to display the injectable content;

a content injection circuit that injects the injectable content into the incoming information; and

an output circuit that outputs the incoming information with the injectable content.

16. The apparatus of claim 15, wherein injectable content includes non-selectable injectable content.

17. The apparatus of claim 15, wherein injectable content includes selectable injectable content.

18. The apparatus of claim 17, wherein selectable injectable content includes at least one of a link to another document source, a link to another document source, a data reduction function, an information filtering function, a calculation performing function, an information printing function, an information storing function, a processing function, or a document viewing/editing function.

19. The apparatus of claim 17, wherein selectable injectable content provides processing without installing software on an accessing device.

20.   A graphic user interface, comprising:

a display window including at least one of non-selectable, selectable, or custom injectable content; and

a display window including at least one of non-selectable, selectable,

5   or custom injectable content as either an icon, text, or an icon with text.

21.   A control system that injects content into a document, the control system comprising:

an input circuit that receives incoming information;

a content database that stores injectable content;

10   a memory that stores a location for inserting the stored injectable content into the received information;

a content monitoring circuit that monitors the incoming information for a location to display the injectable information;

a content injection circuit that injects the injectable information into

15   the incoming information; and

an output circuit that transmits the incoming information with the injectable information to a display manager of a computing device.

wherein the display manager displays a graphical user interface displayable on the computing device, the graphical user interface comprising

20   injectable content.

22.   The control system of claim 21, wherein injectable content includes non-selectable injectable content.

23.   The control system of claim 21, wherein injectable content includes selectable injectable content.

25   24.   The control system of claim 23, wherein the selectable injectable content includes at least one of a link to another document source, a link to another document source, a data reduction function, an information filtering function, a calculation performing function, an information printing function, an information storing function, a processing function, or a document viewing/editing function.

30   25.   The control system of claim 23, wherein at least one injectable content includes at least one selectable icon to access at least one treatment option screen.

26.   The control system of claim 25, wherein the treatment option screen has at least one option to process downloadable information identified in the received information.

27.   The control system of claim 26, wherein the treatment option screen is separately displayed for each downloadable information identified in the received information.

28.   The control system of claim 27, wherein each treatment option screen is sequentially displayed for each downloadable information identified in the received information.

29.   The control system of claim 28, wherein each treatment option screen includes a selectable icon to return to a previous treatment option screen.

30.   The control system of claim 25, wherein the treatment option screen has at least one first portion identifying each downloadable information identified in the received information to be processed, at least one second portion for identifying each downloadable information identified in the received information not to be processed, and at least one control for moving the identification of each secondary recipient between the first and second portions.

31.   The control system of claim 25, wherein the treatment option screen lists each downloadable information identified in the received information.

32.   The control system of claim 31, wherein the list includes at least one markable box, each markable box associated with one downloadable information identified in the received information.

33.   The control system of claim 32, wherein each marked box indicates that the associated downloadable information identified in the received information is to be processed, and each unmarked box indicates that the associated downloadable information identified in the received information is not to be processed.

34.   The control system of claim 32, wherein each marked box indicates that the associated downloadable information identified in the received information is not to be processed, and each unmarked box indicates that the associated downloadable information identified in the received information is to be processed.

35.   The control system of claim 25, wherein the treatment option screen includes a selectable icon to accept the treatment identified on the treatment option screen.

36.   The control system of claim 25, wherein the treatment option screen includes a selectable icon to exit the treatment option screen.

37.   The control system of claim 25, wherein the treatment option screen comprises at least one portion having at least one option to display the injectable content in at least one of either the top or bottom of the received information, at least one option to display the injectable content in at least one of either the right margin or the left margin of the received information, and at least one option to display the injectable content adjacent to any downloadable information identified in the received information.
